SUMMARY

Dedicated and highly motivated IT graduate with a background in software development, Linux servers, cloud technologies, and backend applications. Experienced in developing APIs, managing home servers, and deploying applications. Detail-oriented and eager to apply technical skills, customer service experience, and a strong willingness to learn and take on new challenges. Seeking an entry-level IT position to contribute technical skills, support business objectives, and continue expanding knowledge in software development and IT infrastructure.

EDUCATION

Master of Science in Information Technology at Gannon University

Erie, PA

August 2024 - May 2026

Bachelor of Science in Software Engineering at Gannon University

Erie, PA

August 2019 - May 2024

EMPLOYMENT HISTORY

Sales Advisor at Best Buy

Erie, PA

October 2024 - Present

Delivered customer-focused sales support for computers, electronics, and related services. Provided product recommendations, explained technical features, processed transactions, and collaborated with team members to achieve sales and customer satisfaction goals.

Sales Associate at Gabes

Erie, PA

July 2019 - September 2024

PROJECTS

Remote Rendering Optimization Project | Lockheed Martin

Developed a split-rendering system to stream high-detail 3D models to lower-end devices. Integrated Unity with ArenaXR, implemented Google OAuth authentication, and used Docker to streamline development and deployment.

Hades Bot – AI-Powered Discord Assistant

Developed and deployed an AI-powered Discord bot using Node.js, Discord.js, and external LLM APIs. Built backend command processing, integrated API functionality, and maintained the application on a Linux server using PM2.

Supabase Cloud Image Gallery

Built a cloud-based image gallery with Node.js and Supabase Storage. Developed secure file management APIs and deployed the application on AWS using Docker, Nginx Proxy Manager, and Cloudflare Tunnels.

LLM-Assisted Test Case Generation from GitHub Issues

Developed a Python pipeline to generate and evaluate unit tests using GitHub repository data and LLMs. Automated test generation and validation across multiple repositories, improving test quality through execution feedback and iterative refinement.

Note: Additional projects and technical details available in my portfolio.
